Product Introduction

Product Introduction

Generating Cold Plasma: Cold plasma is generated by applying voltage to a gas (argon), causing it to ionize. Despite electrons gaining significant energy, the overall temperature of the plasma remains close to room temperature.
Releasing Active Ingredients: Cold plasma can produce reactive oxygen molecules and other free radical components. These highly reactive ingredients can penetrate the skin's surface and interact with skin cells.
Due to its low-temperature characteristics, cold plasma can perform deep treatments without harming the skin.
Anti-inflammatory and Antibacterial
Promotes Collagen Production
Enhances Skincare Absorption
Improves Uneven Pigmentation
Accelerates Wound Healing
Scalp Care

Product Parameter

Instrument parameter	
Power Frequency	50HZ
Input Voltage	220V/110V
Rated Power	400W
Energy	1-20
Package Size	55*42*37CM
Language	Language can be customized
GW	13.1KG

Product Introduction

Product Structure Introduction

Front display
(The actual product shall prevail)

1 Hand grip
2 7-inch interface
3 A handle
4 B handle
5 A handle jack
6 B handle jack

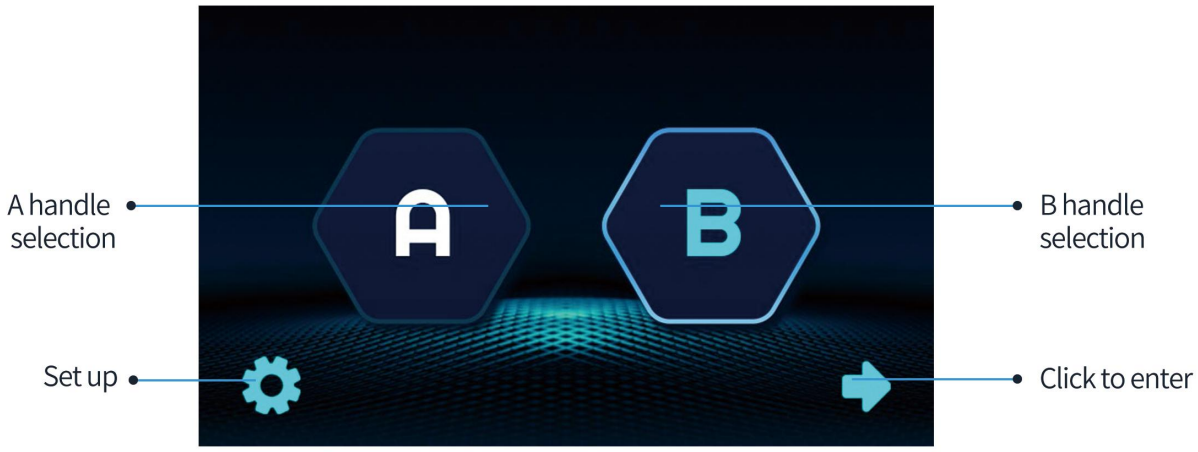
Product Introduction

Product Structure Introduction

Shown on the back
(The actual product shall prevail)

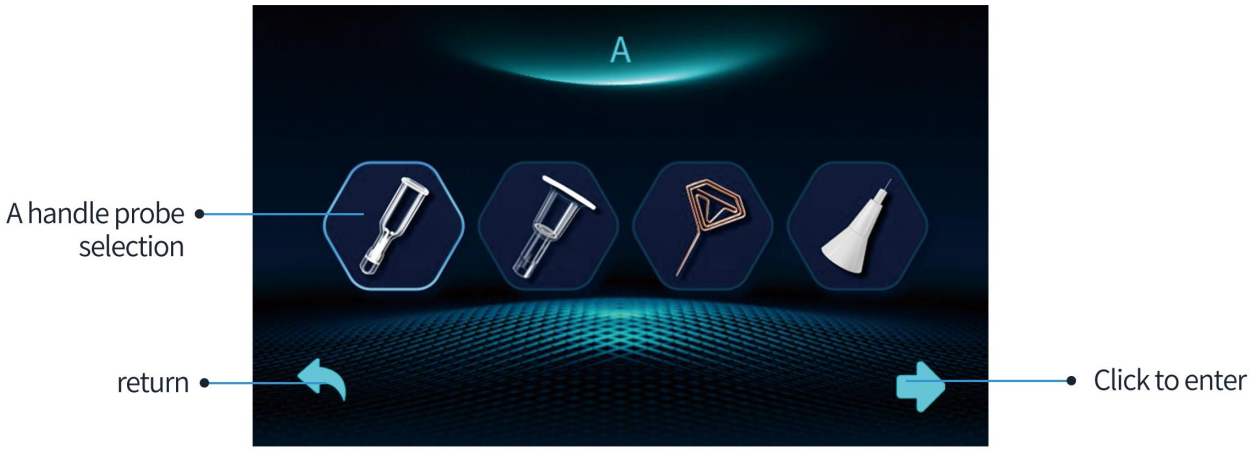
1 B handle
2 A handle
3 Foot jack
4 Heat dissipation holes
5 Power cord jack
6 Power switch

Interface Introduction



(1-1)

(1-1) Open the instrument and enter (1-1). You can select Handpiece A or B for operation. Clicking on Handpiece A interface takes you to (1-2).



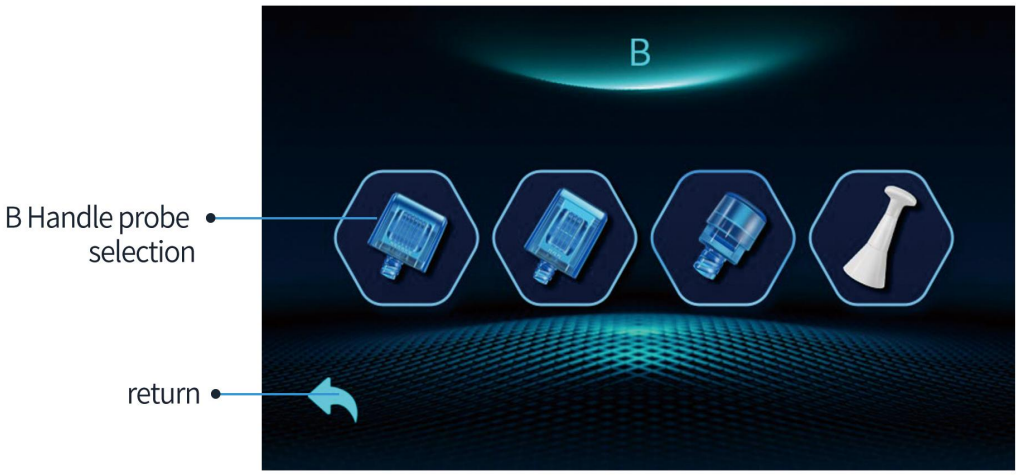
(1-2)

(1-2) In this interface, there are four probes to choose from. Select one probe to enter interface (1-3).

Interface Introduction

(1-3)

(1-3) Adjust the energy level starting from 1 based on customer needs. Click start to begin the operation.



(1-4)

(1-4) Return to (1-1) interface, select Handpiece B to enter (1-4) interface, then click on one of the probes to adjust energy and proceed with the operation.

Instruction for use

Parameter Setting Table (Probe Usage Guide)

Probe Type	Time	Function	Suitable Users	Precautions
Square Tube Head	5-10 minutes	Reduces fine lines, improves skin texture, enhances skincare absorption	People seeking anti-aging and improved skin quality	Gently approach the skin, avoid lingering too long in one area
Trumpet Tube Head	5-7 minutes	Stimulates hair follicles, promotes hair growth, prevents hair loss	People needing scalp care and hair loss prevention	Press gently on the scalp and move slowly, do not linger in one spot
Roller Heads (Large and Small)	3-8 minutes	Optimizes epidermal cell renewal, tightens skin, smooths texture	People wanting to improve skin texture	Gentle and continuous movements, adjust time based on personal tolerance
44P Needle Head	5-10 minutes	Targets stimulation of collagen and elastin regeneration within the skin	People with skin laxity and aging concerns	Precisely control pressure and speed, avoid over-stimulation
Ceramic Head	5-10 minutes	Anti-inflammatory and antibacterial, effective for acne, seborrheic dermatitis	People with inflammatory skin conditions	Approach but do not touch the skin, move slowly, ensure full coverage, watch for allergic reactions
Diamond -shaped Head	5-10 minutes	Enhances skin firmness and elasticity, achieves excellent anti-aging effects	People focused on anti-aging and improving skin firmness	Glide smoothly over the face or neck, focus on areas prone to sagging like around the eyes and mouth
Direct Stream Nozzle	15 minutes	An innovative cold plasma applicator designed for multifunctional skin treatment systems. Focuses on skin infection intervention and restorative healing.	People requiring professional beauty treatments	Must be performed by professionals, follow sterile techniques and protocols, target specific lesions accurately

Instruction for use

Contraindications

1.Individuals with broken skin or open wounds;
2.People with severe skin diseases;
3.Allergy-prone individuals;
4.Pregnant and breastfeeding women;
5.Those who have recently undergone laser treatments or chemical peels;
6.People with compromised immune systems;
7.Individuals with pacemakers or other implanted electronic devices.

Precautions

1.Gentle Cleansing: Use lukewarm water to gently cleanse the treated area.
2.Moisturizing Care: Immediately moisturize using products rich in antioxidants, hyaluronic acid, and ceramides to help repair the skin barrier.
3.Enhanced Sun Protection Measures;
4.Avoid Makeup: Do not apply makeup for several hours after treatment to allow the skin sufficient time to recover.
