Product Introduction

Working Principle

High-pressure jet technology: By producing high-pressure jet air, the nutrient solution containing very small molecules is instantly penetrated through the epidermis and delivered to the base layer of the skin. This technique does not rely on needles to penetrate the skin, avoiding trauma and pain while ensuring effective absorption of nutrients.

Nanocrystals: The use of high-frequency vibration or electromagnetic waves to promote the temporary opening of the skin channel, so that the nutrient solution can penetrate into the target skin layer more accurately, enhancing the hydration and nourishing effect.

Negative pressure attraction technology: The use of negative pressure attraction shallow guide, deep guide technology, which helps to improve the absorption capacity of the skin, make the distribution of nutrients more uniform, promote the skin self-repair and regeneration function.

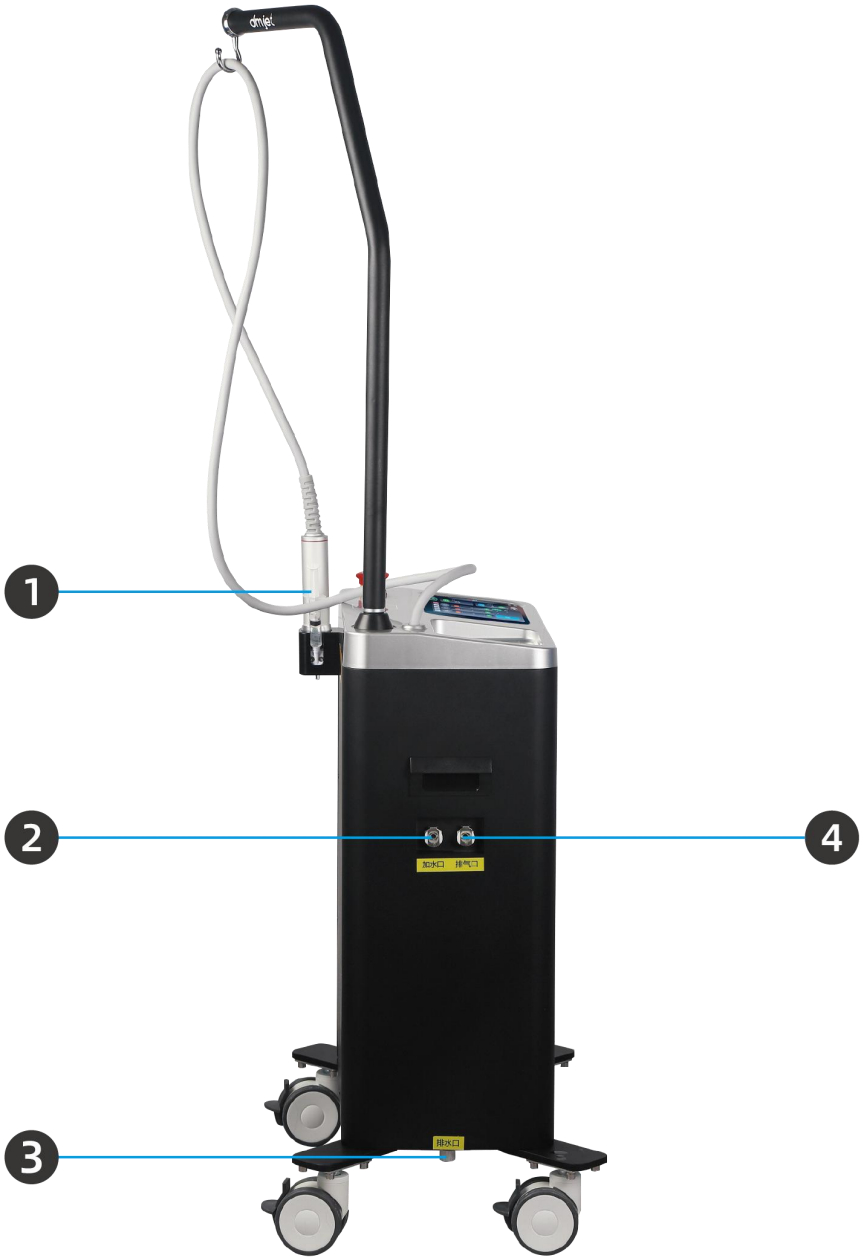
To sum up, it mainly relies on non-invasive physical methods, high pressure, radio frequency, negative pressure suction, etc., to achieve painless and non-invasive beauty ingredients into the skin, to achieve instant hydration, lighten skin tone, reduce fine lines and improve skin quality and other beauty effects. Compared to traditional needle-based water and light injections, needle-free techniques are safer, reduce the risk of infection, and shorten the recovery period.

Product Parameter

Product nozzle	100/150/200/250
Voltage	100-120v
Injection depth(mm)	0.25mm
Injection per second	An average of 0.003 ml (based on 20 hz)
Tap position	100-200
Velocity	1-10
Depth	1-20

Product Introduction

Product Structure Introduction

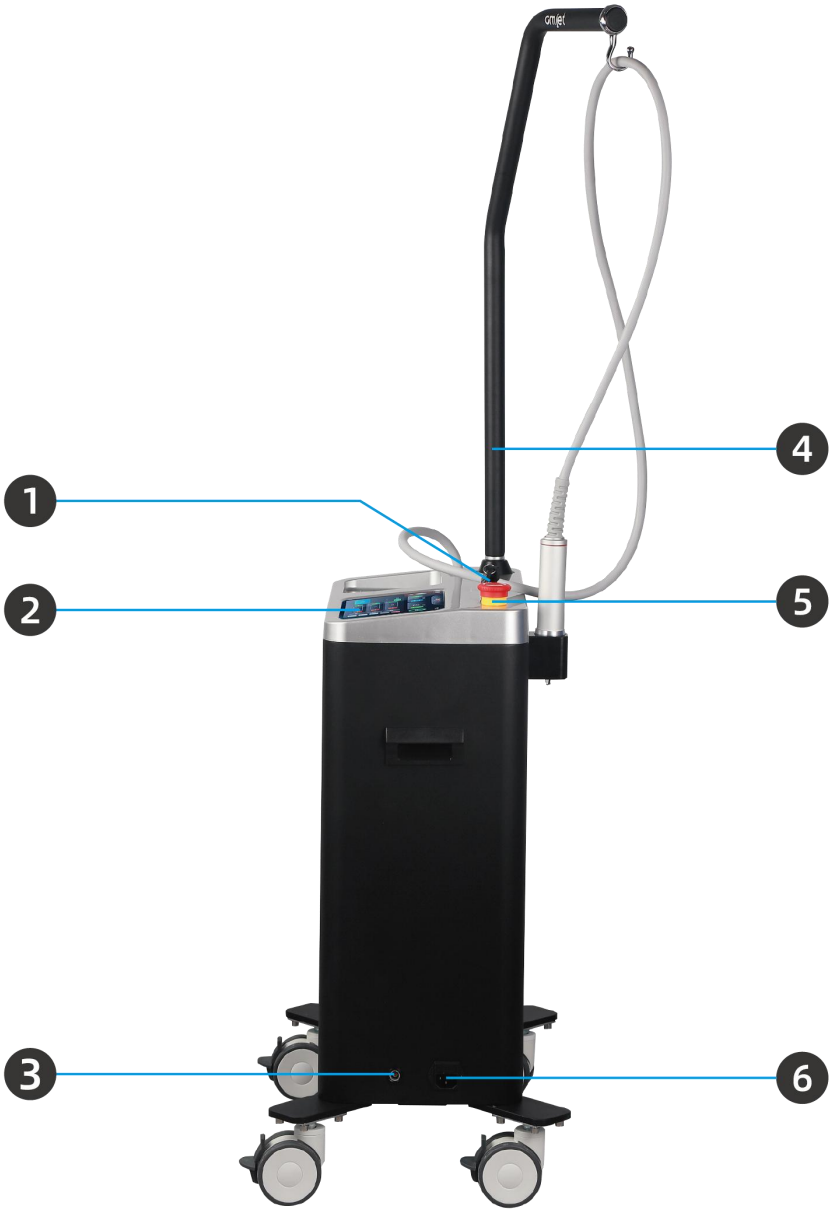


Left of the machine
(Product in kind prevails)

1. Handle
2. Water Inlet
3. Gas Outlet
4. Water Outlet

Product Introduction

Product Structure Introduction



Right of the machine
(Product in kind prevails)

1 Key switch
2 7 inch Touchable Display
3 3. Pedal Socket
4 Pylons
4 E-STOP button
4 Power Core Socket

Instruction for use

Interface Introduction

Click Scan

1-1

1-2

Open the instrument into (1-1), click Scan, and scan the bar code of the nozzle against the Tag above the instrument,
Enter the operation interface as shown in Figure (1-2), and adjust the gear between 100-120 (adjust the gear to 200 blank dozen in the first 20 rounds of operation); Speed adjustment between 2-5; Flow adjustment between 10-15, click start operation;
RE shows how many rounds are currently typed and CS shows how many rounds are currently left

Instruction for use

Parameters Setting

(The actual operation situation is adjusted according to the situation reflected in the patient's treatment)

Skin type	Tap position	Tap position	Depth
Thin skin, sensitive muscles	100	2	≥10
Normal Skin	120	5	≤10
skin wrinkles	120	2-5	≤10
skin pores	120	2-5	≤10
skin whitening	120	2-5	≤10
scar	150	5	≤10
stretch marks	150	5	≤10

Suit a crowd:

1, pore bulky, color of skin dark heavy, uneven skin tone: help narrow pore, carry bright color of skin, improve skin color uniformity.
2, the skin is dry, water scarcity, is particularly suited to look old or lack of luster for dry skin, can effective hydrating.
